

Custom Packaging and Assembly Systems

Turn-key packaging systems

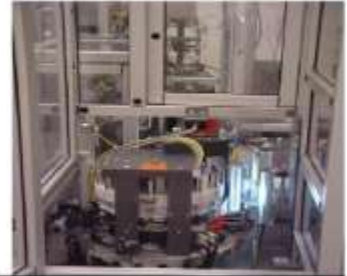

High-speed assembly systems

Custom material handling systems

Innovative new products breed potential success in today's marketplace, but getting those products to market may also mean using innovative new processes in your custom packaging and manufacturing environment. Standard "off the shelf" equipment may only be part of the solution or may not be applicable at all in creating the right system for your packaging and production needs. DTE provides a unique blend of engineering professionals along with vertically integrated production facilities staffed with experienced craftsmen to support your efforts in quickly bringing these products to market. Our project teams analyze your needs and offer solutions ranging from system integration of existing technologies, all the way to designing one of a kind systems that provide the unique solutions to your packaging and manufacturing challenges.

High-speed labeling systems

Vision inspection systems

Turn-key packaging systems
