What are the keys to Detroit Tool and Engineering's success? How does a Tool and Die shop that was founded in 1933 make it in this competitive business? What's the key?

Experience

All skilled trades must have seasoned craftsmen to pass on the wisdom that they've gained over the years. Individuals within our group average over 22 years experience in the trade. That equates to veteran tool engineers, designers, tool makers and machinists who know how to get the job done right and on time.

Work Ethic

Hard work and determination are essential to success and our employees have always set the high mark in the industry. Over the many decades that we've been building dies, we've found that our customers are genuinely impressed with the tenacity of our staff. We are unwilling to walk away from a challenge and take pleasure in our 'never say die' approach to tool making.

Heritage

Walk onto a campus of one of the 'old school' universities and you'll feel the power that comes from the deep pride and overwhelming commitment that resides there. Detroit Tool has been a part of our small town for many generations. We have fathers, uncles and brothers that have worked within our walls. We also have enjoyed long standing relationships with many customers. This all contributes greatly to a deep confidence about our future.

Adaptability

Willingness to change and a plan for the road ahead are paramount necessities. The die making trade has seen a multitude of changes that have altered our course. Changes in technology, supply chains and global sourcing influence our business. The leadership at Detroit Tool is dedicated to research and revise our strategy in order to remain strong for our customers, employees and community for our future generations.

Fifty minutes driving time from the Branson/Springfield airport down I-44. Direct flights from Chicago, Memphis, Detroit, Dallas, Cincinnati, and Denver.

- 100,000 square foot facility
- \$7-10M annual revenue

www.detroittool.com

DTE has all of the equipment in place to please the most discriminating customer. One of our latest additions is a 1,000 ton press with coil feed line for your die try-out requirements. The Tool & Die operation has approximately 100,000 sq ft of facilities and can handle over \$10 million in tooling annually. We service many industries including: Appliance, HVAC, Heavy Truck, Automotive, Agricultural, Electrical, and Lighting. DTE excels in large, complex new die build packages, but we can repair and refurbish your existing dies as well. DTE has also shipped impressively complex systems that showcase the blend of our Tool & Die and Special Machine groups. See for yourself what's new at Detroit Tool & Engineering. We'd love to show you why we're so excited about our future!

You can depend on Detroit Tool & Engineering to be here for your tooling needs ... for decades to come!
